FOR IMMEDIATE RELEASE

COIL STEEL PROCESSING ORDERS NEW .250" CUT-TO-LENGTH LINE WITH STRETCHER LEVELER FROM RED BUD INDUSTRIES

Toledo, Ohio – Coil Steel Processing (“CSP”) is excited to announce that it has ordered a second Red Bud Industries High Strength, Cut-to-Length Line with a Stretcher Leveler.

The new line’s capabilities will be 0.250 in. (6.35 mm) by 72 in. (1829 mm) by 60,000 lbs. (27,216 kg). The T1 Stretcher Leveler will be equipped with Red Bud’s Quick Draw and SUREGRIP® technology. These innovations offer the fastest cycle times in the industry, and long-life metallic grippers that prevent slippage without the use of any additional consumable product.

The Shear, Drop Stacker, Continuous Stacker, Stack Table, and Rollout Conveyors will be automated to run orders without operator intervention. When pallets are required, they can be staged and automatically loaded with the Magazine Pallet Loader.

“Adding Stretcher Leveling capabilities in 2021 created many opportunities for us since ‘laser quality’ flatness is a frequent requirement. We have done well with those customers, and it has become clear that market demands support another line. We are committed to investing in technology that meets and/or exceeds our customers’ expectations. The addition of the new line will expand our stretcher leveling and packaging capabilities to (.020→.625”),” said Kevin Friedman, President & Owner of Coil Steel Processing.

CSP is a service center located in Northwest Ohio specializing in Cut-to-Length steel processing. With over 150,000 square feet of indoor storage, CSP has the capacity to inventory up to 75,000 tons of steel coils and sheets. CSP prides itself on providing the highest quality services and is equipped and staffed to meet flexible or aggressive timelines, even for high volume jobs. Operating exclusively as a toll processor, CSP’s customers are assured their company will not be in direct competition!

Red Bud Industries is the top manufacturer of Coil Processing Equipment, with Cut-To-Length Lines, Multi Blanking, Light and Heavy Gage Slitting Lines, and Stretcher Levelers found in operation in all the major world markets.
